

Identify gaps in your cloud identity footprint

Cloud Identity and Security Discovery

A Cloudneo-led engagement to evaluate your current **Cloud Identity** and **Security** deployment patterns. We will carry out an analysis of 'current state' and then evaluate this against best practices shared by vendors.

Cloud Identity & Security Discovery

Optimize your Cloud Identity and security framework

Assessment highlights

Expert led evaluation, analysis, best practices from leading cloud vendors.

Identify and explore avenues to strengthen your cloud identity and security posture.

Comprehensive report of current state, clearly defined plans to fulfill your organization goals.

- Expert lead analysis and report on current and desired state.
- Cloud identity evaluation and alignment to vendor recommended practices
- Recommendations on key areas to focus within cloud identity and security.
- Guidance provided to leadership teams, Architects and system engineers.
- Advise on how to maximize return from existing cloud investments.
- Comprehensive Report which highlights gaps related to ease in authentication, security, provisioning and governance.
- Duration: 1 week

This engagement is primarily focused on cloud Identity and Security, addressing the following quick steps of enablement:

1. Discover

Evaluate current Cloud identity, Governance, authentication & security posture.

2. Align

Identify areas and devise methods to align to Security best practices of the vendor.

3. Focus

Knowledge transfer to explore gaps, discuss Identity Governance and Security strategy, build deployment ideas.

4. Report

Report with key highlights in areas of Secure Identity and Access Management Framework.
